

Esteve Química revamps its website in order to continue to be a key supplier for the healthcare industry

- Embedded in the corporate portal www.esteve.com under the name of Contract Manufacturing, the website now offers its users a more intuitive and functional structure
- Today, Esteve Química is a reference partner for the development and manufacture of active pharmaceutical ingredients for third parties

Barcelona, 2 April 2020.- The www.estevequimica.com website has just been revamped to reflect ESTEVE's new strategic positioning as a single company. Furthermore, the new portal is more intuitive and functional for the user, who can easily consult all Esteve Química's information

www.estevequimica.com
Esteve Química launches its new corporate website with a structure much more intuitive and functional. We renew for you!

The reference partner for manufacturing and process development of Active Pharmaceutical Ingredients for the Health Care Industry.

Flow Chemistry
We at Esteve Química are always seeking to improve efficiency in our manufacturing processes to meet the ever-changing requirements of the market. Flow-Chemistry – one of the most innovative technologies – is a manufacturing technique that should provide some competitive edge regarding the traditional manufacturing processes.

High Potency APIs
In 2016 Esteve Química decided to increase its current manufacturing capabilities with new facilities. To this end, the decision was made to install two different units:
— Laboratory for high-potency APIs located at our R&D center in Barcelona
— A manufacturing unit allowing HP APIs to be manufactured under state-of-the-art hygiene.

Particle engineering
Spray Drying - Adding value to your API
Esteve Química recently set out to offer the best process service to its customers. Understanding customer specific needs is key to manufacturing great medicines and contributes to the well-being of people.

ESTEVE QUÍMICA

The main aim of the overhaul of the portal is to reflect Esteve Química's extensive experience as an integrated service provider adept in incorporating state-of-the-art technologies, with solutions tailored to the needs of its customers.

On the website, which is embedded in the corporate portal www.esteve.com, the user can access information about the company's production centers in Europe (an R&D center and two plants in Spain), Asia (China) and America (Mexico), and about its commitment to quality or the latest technologies they are currently applying.

These include flow chemistry, the development and manufacture of highly potent active pharmaceutical ingredients (HP APIs) or the application of particle engineering to the manufacture of active pharmaceutical ingredients (APIs).

About ESTEVE

ESTEVE (www.esteve.com) is a global pharmaceutical company based in Barcelona. Its mission is to advance in innovation in order to improve people's lives. Since its foundation in 1929, its focus has been to provide solutions for unmet medical needs. ESTEVE has an important presence in Europe and the USA through subsidiary companies and its own production facilities dedicated to the development and manufacture of active pharmaceutical ingredients in Spain, Germany, Mexico and China.
